## onLoadFinished

**Introduced:** PhantomJS 1.2

This callback is invoked when the page finishes the loading. It may accept a single argument indicating the page's status: 'success' if no network errors occurred, otherwise 'fail'.

Also see page.open for an alternate hook for the onLoadFinished callback.

## **Examples**

```
var webPage = require('webpage');
var page = webPage.create();
page.onLoadFinished = function(status) {
  console.log('Status: ' + status);
  // Do other things here...
} ;
```
